

Redesign the Misleading Colored Chart

R.No: 39 Reg. No: 192524311 Name: Vennampalli Boopathy Khanishk

Each chart below uses color in a misleading or confusing way. For each one, answer the three questions in your own words.

Chart 1

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

1. What is this chart trying to show?

It shows how many people chose Disagree, Neutral, Agree, or Strongly Agree on a product review.

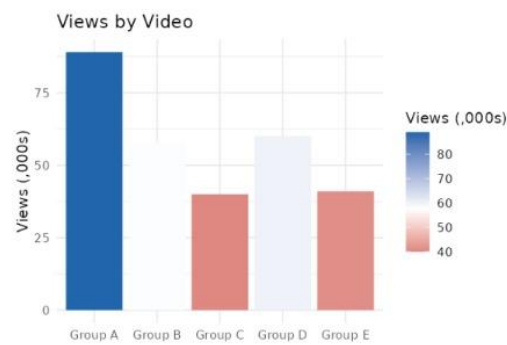

2. What's wrong with the color choice?

The colors are confusing because red is used for "Agree" (which normally means good/stop) and green is used for "Strongly Agree". Using totally different colors for every bar makes it hard to see a clear rating order.

3. Propose a better color scheme (describe it in words):

Use shades of a single color (like light blue to dark blue) that get darker as agreement increases, or go from red (Disagree), gray (Neutral), to green (Agree/Strongly Agree).

Chart 2

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

1. What is this chart trying to show?

It shows the number of video views for five different groups (Group A to Group E).

2. What's wrong with the color choice?

It uses color to show views, but the height of the bars already shows that, so the colors are unnecessary. Also, using a red-to-blue gradient makes it look like red groups are bad or low, which is confusing for simple view counts.

3. Propose a better color scheme (describe it in words):

Use one solid color (like simple gray or blue) for all the bars, since bar height already shows the number of views.
